ABSTRACTED-PUB-NO: SU 1820089A

BASIC-ABSTRACT:

Toothed **belt** comprises carrier element in the form of a wound **cord** (2), and elastic base (3) with **teeth** (4) which have lateral **spiral** spring reinforcing elements (5) and cylindrical pins (6) in them. The **spiral** springs (5) are mounted in such a way that the **cord** (2) elements lie tangentially between the windings of the **spiral** springs (5), which lie tangentially to the working surface of the **teeth** (4).

USE/ADVANTAGE - As a flat toothed drive **belt**, increases reliability and longevity by increasing tooth strength. Bul.21/7.6.93
